The continuous growing of the web makes more important the use Information Retrieval (IR) based tools in order to locate, filter, manage and access the huge amount of information available on internet. Nowadays, there are multiple IR tools which are part of our everyday life so, encouraging and supporting IR research is a key issue to keep on improving this field.

The Spanish Information Retrieval Society (SERI), organizer of this event, has as main goal to support IR in Spain. This conference aims to continue with the work developed on its previous editions and to provide an international forum where researchers from both academia and industry can meet, exchange experiences and present innovative works. CERI welcomes contributions from a wide range of knowledge areas. Specifically, we encourage the participation of not only researchers and professionals from the Computer Science field, but also researchers with background and experience on Documentation, Linguistics, or any other related area to IR.

All scientists interested in IR related fields are welcome to participate. We encourage national and international researchers from both academia and industry to submit original papers, written either in Spanish or English, related to any aspect of IR including, but not limited to the following:

- IR models
- Performance, scalability, architectures and efficiency
- Data structures on IR
- Web IR
- IR Quality Evaluation
- User aspects: interaction, user studies and interfaces
- Filtering and recommendation systems
- Structured retrieval (XML, etc.)
- Semantic search
- Digital libraries
- IR in social networks
- Opinion mining
- Vandalism detection in the Web, in Wikipedia and opinion spam
- Detection of paedophilia, stalking and bullying
- Multimedia retrieval
- Text mining (classification and clustering)
- Natural Language Processing in IR
- Passage Retrieval and Question Answering
- Multilingual and cross-language IR
- IR in specific domains (biomedical, patents, law, etc.)
- Geographical IR
- Collaborative IR

3rd Spanish Conference on Information Retrieval

Important Dates

Paper submission: March 25, 2014

Short paper submission: April 1, 2014

Notification: May 7, 2014

Camera ready: May 14, 2014

A Coruña, June 19-20th 2014
<http://ceri2014.udc.es>

A Coruña is the main city of Galicia, the northwestern region of Spain. A Coruña is a busy port located at the entrance of an estuary on the Atlantic coast. The city features a complete offer of leisure activities ranging from beach sports along the seafront that surrounds it (surf, sailing, biking, etc) to a wide program of cultural events, an active shopping area, restaurants, tapas bars and a crowded night life. Historically, it served as the regional capital between 1833 and 1982, before being replaced by Santiago de Compostela. The city has its own English (Corunna) and French (La Corogne) place names, mostly because of a famous battle that took place in the Elviña Campus in January 1809 when Napoleonic forces attacked a retreating British army trying to embark on ships for their return to Great Britain. In that campus, few meters away from the monolith which recalls that battle is located the Computer Science Faculty of A Coruña, the conference venue.

Corunna is a modern and active city with many events (concerts, expositions, sports, etc) all over the year. The most emblematic monument is the Tower of Hercules (recently recognized as an UNESCO World Heritage Site) an ancient Roman lighthouse with a XVIII century façade. After the closing of the Conference, on June 23rd, takes place the Saint John's night celebration (Summer solstice) on the urban beaches of Riazor and it is a unique opportunity for the attendees to feel the true spirit of the city and its people.
